AMENDMENTS TO THE SPECIFICATION

Please replace paragraph [045] with the following amended paragraph:

[045] In an embodiment comprising at least two nodes wherein one node may be a datastore and the other may be a server, the datastore may be associated with a first predetermined set of data values. The server may be associated with a second predetermined set of data values. The interactions in the system may comprise opening said corresponding logical datastore; obtaining a set of additional information about said request from said database; determining which of said at least one corresponding physical server and corresponding logical server may be associated with a combination of said request and said set of additional information; routing said request to said corresponding logical server; allowing said corresponding logical server to access and modify said corresponding logical datastore; and processing said request on said corresponding logical ~~datastore~~ server.

Please replace paragraph [0133] with the following amended paragraph:

[0133] Physical Server Partitioning ~~[Missing here some discussion of the file control and application control databases]~~
